

Trans Baltic

Towards an integrated transport system in the Baltic Sea Region

”FORESIGHT SESSIONS AND EXPECTED RESULTS”

VÄSTERBOTTEN

Challenges

- Societal Challenges (Climate Change, Peak Oil, Competitiveness, Sustainability ...)
- Linking Transport Policy on different levels with other Policy (Research etc.)
- Decision-making under deep uncertainty
- Forecasts on what will happen in 40 years are very likely to be wrong

Towards an integrated transport system in the Baltic Sea Region

Foresight processes

- Foresight is a **conceptual framework** for a number of **forward-looking approaches** of informed decision-making that include long-term considerations (Miles 2008).
- Answer to a lack of governance strategies dealing with **complex and unpredictable transformation patterns**.
- They focus on the increasing need of both economy and policy for **generating anticipatory strategies** and future scenarios *in the present for the present*.

Towards an integrated transport system in the Baltic Sea Region

Application of Foresight

- Establishing a **transparent** structured support process for decision-making
- Introducing a **forward-looking** attitude - anticipative intelligence
- **Provoking** a creative and motivating decision making
- Stimulating a **participative** approach
- **Enabling** mutual learning and strategic dialogue
- **Reaching consensus** around shared visions
- **Linking** technology and innovation to wider socio-economic issues
- **Paving the way** for coordinated/coherent action
